ABSTRACT OF THE DISCLOSURE

An image processing condition determining
apparatus has an image obtaining section for obtaining an
initial image, an image processing section for applying
image processing to the initial image in accordance with
the reference image processing condition and applying image
processing to the initial image in accordance with the
variation image processing conditions, so that a string of
images is created on each of at least three sorts of
adjustment parameters, a display section for displaying the
image assembly created by said image creating section, and
a reference image set up section for setting up one of a
plurality of images constituting a plurality of image
assemblies displayed on said display section in form of a
new reference image according to operation. The image
processing section repeats creating of a new string of
images, taking as a reference a new reference image
processing condition associated with a new reference image.
